                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC This sequence represents a novel human extracellular/epidermal growth CC factor-like protein, EEGF. This protein can be used to regulate CC vascular smooth muscle cell proliferation and for restoration or CC enhancement of neurological functions diminished as a result or other CC damaging pathologies such as AIDS dementia. The protein can also be used to treat senile dementia, ocular disorders such as corneal inflammation, CC for targeting tumour cells, for treating kidney disorders, for liver CC regeneration or treating liver dysfunction, for treating wounds including CC all cutaneous wounds, corneal wounds, and injuries to the CC as burns, abrasions and cuts as well as from surgical procedures such as CC surgical incisions and skin grafting. The polypeptides can also be used CC other non-healing (trophic) conditions, to treat Marfan syndrome, to CC promote hair follicular development, to stimulate growth and cC vitro and to stimulate embryogenesis. Antagonists to EEGF can be used to treat neoplasia such as cancers or tumours, skin disorders such as CC psortasis or corneal inflammation. The products can also be used for identifying EEGF receptors, detection, diagnosis and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                           kidney clone AK296. Such a sequence is predicted to have biological activitles which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemostatic activity, regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. It is also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                               New polynucleotides encoding secreted human proteins - a from foetal kidney or adult retina cDNA libraries, used potential vaccines
                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1999-095671/08.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
